QuickKut is a handy application that can be used by web designers for cutting the corners of their images. It's quite simple to use. First, select a frame. Then choose File > Open to open a picture to work on. Then just configure frame settings. Finally, choose File > Export to export a framed image. If you want to make

the frame transparent, make sure you enable the checkbox labeled Transparent background. Of course, in that case, you need to select PNG or TIFF as an export format. Hi, my name is meowboom, and welcome to meowboom.com!

Mr Brown said: "The whole world is about to be rocked by an election that could be anywhere from a victory for Mitt Romney to a victory for Barack Obama. "The British parliament is about to re-assert its fundamental role as a place where
